Data available through WaDE

1. Water rights
2. Aggregated water budget estimates
3. Site-specific use and withdrawals
4. Regulatory overlays

Questions WaDE 2.0 is designed to answer

- What are the appropriated **water rights** in an area sorted by date? List their beneficial use (s)
- What is the annual **water budget** in a watershed over time?
- How much water is being **used in a location** over time and for what purpose?
- What are the **regulatory** constraints in a watershed?

Connecting Water Data to Enhance Decision-Making

USGS
science for a changing world

Register now!!

Western States Water Council and the U.S. Geological Survey are proud to co-host the
**2019 Water Information Management System
(WIMS) Water Use Workshop**

Fort Collins, CO
Sept 16-19th, 2019

Register to attend the WIMS and USGS Data Collaboration workshop to meet with other eastern and western states' managers and USGS scientists presenting on new research and tools for water use estimation, including remote-sensing techniques and programs to help you with your water use needs. We'll also spend time sharing the latest water data solutions from sister state agency data program managers and IT specialists.
All in beautiful Fort Collins, Colorado!
